

Yudi Gunawan

Frontend Developer

As a frontend developer, I excel in crafting visually appealing websites using HTML, CSS, and JavaScript. I specialize in building from scratch, optimizing performance, and ensuring cross-browser compatibility. Proficient in Next.js, Angular, and Drupal, I value teamwork to achieve project goals efficiently. My focus on exceptional user experiences ensures valuable contributions to any project or team.

EDUCATION

S1 Teknik Informatika

Universitas Putra Indonesia YPTK

06/2015 - 02/2019

Padang

SKILLS

PROJECTS

Sales POS

- an application that helps manage the process of selling and paying for products or services through the point of sales system. This application speeds up the payment process, monitors inventory, and generates real-time sales reports

Design System

- set of design and development guidelines for building websites or applications with consistent visual and user experience, including design elements and technical guidelines. Benefits include easier development, minimized confusion/errors, consistency, and a professional user experience.

Digiads

- Digiads.id is a digital marketing platform providing social media marketing, search engine marketing, website development, training, and consultation services. The platform helps businesses improve their digital marketing strategies with its experienced professionals and affordable solutions.

Tsurvey

- tsurvey.id is a survey platform that enables users to create, distribute, and analyze surveys to gain insights and feedback from respondents.
- The platform offers various features, including customizable survey templates, multiple question types, real-time data visualization, and data analysis tools.
- With its user-friendly interface and affordable pricing, tsurvey.id aims to provide an accessible solution for individuals and businesses looking to conduct surveys and gather valuable information.

CROX

- CROX is a survey platform as a means of connecting to conduct surveys to Telkomsel customers. The survey can be in the form of questionnaires, online interviews, or task-based testing. The surveyed items can be a running service (evaluation) or a prototype (testing).

Nicelink

- A platform for merchants to integrate with payment gateways, manage transactions, process refunds and credit card captures, register products for payments, and an internal system for approvals and transaction monitoring. These are two separate applications utilizing a microfrontend concept.

Flutter Package QR Code

- A Flutter package I've developed to assist individuals needing QR code functionality in their applications.
